

V-Cube Consumer Service

Enter the VoIP Marketplace Now

Currently new operators are entering all the world's voice markets with peer-to-peer VoIP services. These companies are already selling to your customers. Vistula's Consumer Service enables you to get to market immediately with a simple pre-paid or post-paid VoIP telephony service.

Vistula's V-Cube is a SIP IP Telephony offering with flexibility in customer billing and reporting. Your customers can use the service to register and activate their accounts on-line, without having to go through your customer service facility, with V-Cube's no-touch registration and activation.

Significantly, we can offer our Consumer Service for launch within one month of contract signature.

Deliver value, convenience and cost savings

With your own white label VoIP service powered by Vistula's V-Cube, your customers enjoy the convenience of an additional phone line along with the benefits of a whole range of features.

A separate Call Shop application is also available and can be developed to meet specific needs. The current product is both hardware and software based and provides:

- LCD displays that show the customer how the call is decrementing and the time remaining

- A web portal for the Call Shop to manage a number of "booths" by allocating money from a single account (the Call Shop account) to the booths and repatriating to the "Call Shop account" any residual value after the call has terminated.

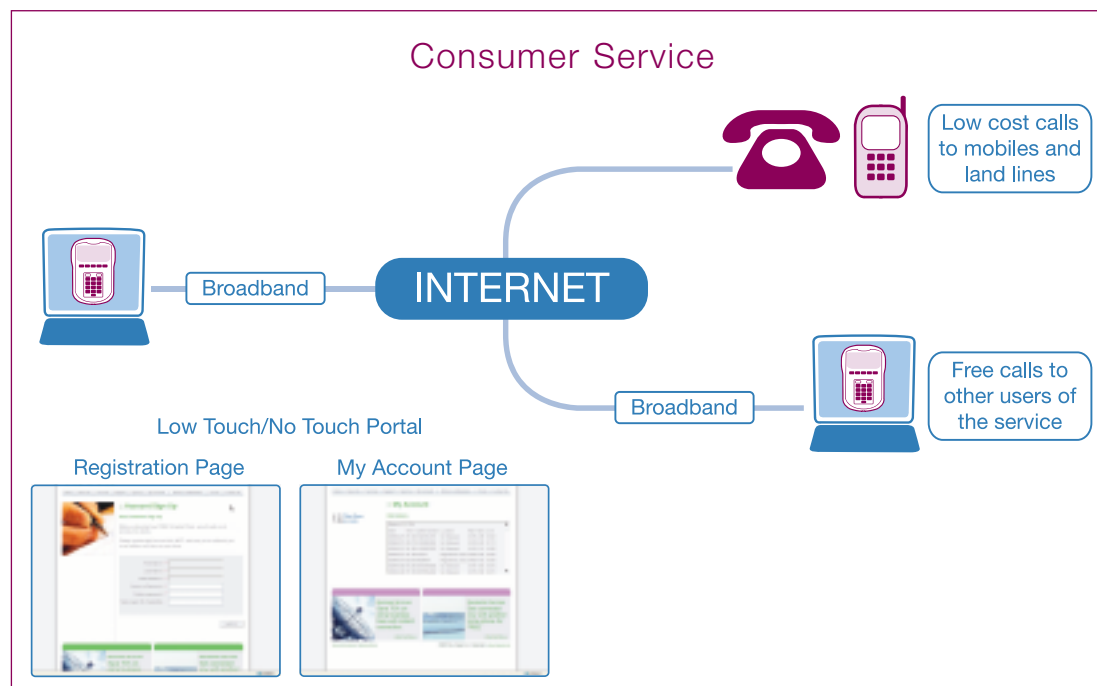

Key customer features include:

- Outbound calling
- On-net calling – free calling between registered users
- Multiple users from a single softphone or ATA, using PIN's to credit the service for each specific user
- PIN based operation option
- NAT traversal
- Voicemail
- Branding – "look & feel" of the portal customised to match clients existing branding. The service has two portals, one for the retail user and other for management of the service
- Pre-paid and post-paid – these components can operate simultaneously or independently. E.g. a fixed monthly component pre-paid and a variable post-paid component if desired
- Credit limit for post-paid accounts
- Management portal – access for the administrator to the whole system
- MIS Reports – to track and analyze traffic patterns

Simple,
Flexible,
Powerful

V-Cube Consumer Service

Vistula makes it easy for you

With V-Cube you can quickly and easily provide your customers with a compelling VoIP service. You'll be offering them flexibility, power and significant cost savings while you enjoy a new revenue stream, increased customer loyalty and improved competitive differentiation.

What makes Vistula's V-Cube Consumer the best available VoIP service is our soft switch. As well as providing carrier-class switching and call routing, it also features an easy-to-use web-based portal that makes service provisioning, maintenance, reporting and administration a quick and simple process.

- Consumer Portal for Rapid deployment
- No-Touch Customer registration and activation
- Various pre-paid or post-paid options for your customers
- Integration with your existing back office, especially billing
- SoftPhone, ATA or VoIP Phone, with or without PC
- Full Management/Administrative Portal
- Full Brand Customisation of Portal
- From Contract to Launch inside a month
